

HEXASHIELD

Security Assessment & Neural Triage Report

TARGET AUDIT

REPORT ID

GENERATION DATE

INTEGRITY HASH

TOTAL VULNERABILITIES

I. Executive Risk Matrix

This document details the cybersecurity posture of target **127.0.0.1**. Using socket-level fingerprinting, automated port interrogation, and Random Forest risk scoring, our neural engine has analyzed the threat surface.

Infrastructure Service Fingerprints

Detected Version: OpenSSH 9.2p1

Server Type:

Powered By:

II. Infrastructure Service Discovery

Network Service Mapping & Asset Fingerprinting records for active open socket communication ports.

Port / Protocol	Service	Platform / Version	Status
22/TCP		9.2p1	Open

III. Vulnerability Index

Exposure Vector	CVSS Score	Severity	Exploit
OpenSSH Regression Remote Code Execution CVE-2024-6387		Critical	Yes

IV. Tactical Findings Details

	CVE-2024-6387
--	---------------

A signal handler race condition vulnerability was found in OpenSSH's server (sshd).

REMEDIATION ACTION: Upgrade to OpenSSH 9.8p1 or newer immediately.

V. Neural Accuracy Validation

Model validation metrics using a Random Forest classifier with stratified cross-validation on a 2500-sample dataset.

94.6% Model Accuracy (Recall Baseline)	97.2% Inference Reliability
